

Create your own... 3D Christmas Card

You will need:

- Purple and white card
- Scissors
- Glue or Pritt stick
- Felt tip pens
- Ribbons
- An adult to help
- Any other decorations!

How to make:

1 Firstly, fold your purple card in half. Use any other coloured card if you prefer!

2 Next, draw four lines at the back of your card and carefully cut them in a straight line. The top should be shorter with the middle being the longest line. Use the image as reference.

3 With your lines cut - fold the card accordingly. They should form three cube-sized squares as the image above.

4 When you open up the card, it should form a 3D shape as above.

5 Next, stick the purple card onto some plain white card - only glueing the edges and leaving the middle untouched. This will allow your card to pop-out!

6 Get some plain paper and cut them to the shape and size of your 3D pop-out cubes. Then draw some patterns on them - or any other messaging if you prefer.

7 Stick your design onto the pop-out cubes and wait for them to dry.

8 Finally, decorate your pop-out with ribbons or any other decorations that you like! Don't forget to write a message and you have your very own 3D Christmas Card!
